

# Inventory

- review / any questions?
- inventory
  - what is inventory?
  - the inventory identifier
  - system vs physical inventory
  - maintenance policies
  - ownership
  - identifier
  - availability
  - storage locations
  - parent inventory
  - adding / updating in bulk
- seasonal availability
- recording actions

Books on medicinal chemistry and drug synthesis, including titles like "Medicinal Chemistry" and "Drug Synthesis".

Books on pharmacokinetics and drug metabolism, including titles like "Pharmacokinetics" and "Drug Metabolism".

Books on clinical pharmacology and drug safety, including titles like "Clinical Pharmacology" and "Drug Safety".

Books on pharmaceutical quality control and manufacturing, including titles like "Pharmaceutical Quality Control" and "Manufacturing".

# Physical Inventory

---

The “heart” of the GG database

# System Inventory

---

- Necessary for GG
- Not real inventory
- Do not touch!

# Planning for Inventory Records

---

- Consider
  - which site will “own” the inventory
  - how you will name the generations
  - where the inventory will be stored
  - what amounts are considered adequate / “critical”
  - is seasonal availability a concern

# Inventory Maintenance Policy

---

- Every inventory record is tied to an Inventory Maintenance Policy (IMP)
- The IMP acts as a template when making new inventory records
- The IMP determines ownership

# Inventory Maintenance Policy

---

- acts as a *template* when making new inventory records...

Indicates:

- the germplasm form to be distributed
- standard amount to be distributed
- critical distribution and replenishment levels

# Inventory Maintenance Policy

---

- determines the *owner*
- the *owner* determines the *site*

The Inv. Maintenance Policy populates a new inventory record with the policy's default values for *certain* fields
